

BLS 201 SERIES

TWIN DUST FILTERS WITH BAYONET CONNECTION

201 series filters are a very light alternative of the traditional dust filters in rigid canister. They protect from particulates and are available with activated carbons. They are compatible with all BLS's devices with bayonet connection.

DUST FILTER

The filters provide protection from solid particles, fumes and mists (liquid particles).

BAYONET CONNECTION

This connection is highly intuitive allowing a quick and safe hold on the mask. It has a locking feedback allowing the user to know if the filter has been properly placed.

LIGHT AND SMALL SIZE

The BLS 201 Series flat filters are characterised by a lightweight design and reduced footprint. Features that are appreciated both in use and in transportation.

AVAILABLE WITH ACTIVATED CARBONS

Activated carbons protect from acid and organic gases-vapours and ozone below the Threshold Limit Value (TLV), specific for every substance.
